RESEARCH INTERESTS

My research focuses on the intersection of bilingual language comprehension and broader predictive dynamics of online processing. Using a neurophysiological (EEG) and NLP (Transformer-Based Large Language Model) guided approach, I am principally interested in identifying how bilinguals generate expectations about low-surprisal items in their L1 and L2 and how this prediction unfolds across types of cues and during syntactic dependency parsing. I connect this research to broader interests in clarifying individual-, group-, and paradigm-level differences in predictive processing by integrating experiential, socio-pragmatic, and instructional manipulations into eye-tracking work within the Visual World Paradigm. I situate my research as an effort to explicate the automaticity, pervasiveness, and homogeneity of the anticipatory language component under a multi-dimensional analytic lens.
